

Slipdesk - Getting Started

Payroll & payslip setup for CHRES

Welcome to Slipdesk. Your account is active. This guide covers importing your team, running your first payroll, and downloading payslip PDFs in bulk.

What you'll use Slipdesk for

- Running compliant Liberian payroll (LRA tax + NASSCORP)
- Generating branded PDF payslips for all employees
- Keeping a secure record of each pay period

Note: Payslip delivery by email is not part of this initial setup. You will download PDFs directly from Slipdesk and distribute them through your own process.

Step 1 - Company profile (about 10 minutes)

1. Log in at your Slipdesk URL.
 2. Open Settings.
 3. Complete:
 - Company name
 - NASSCORP registration number
 - TIN (if applicable)
 - Company logo (optional; appears on payslips)
 - Brand colors and payslip footer (optional)
 4. Click Save.
-

Step 2 - Import your employee roster (about 30–60 minutes)

1. Go to Employees.
2. Click Import → Download template.
3. Fill in the spreadsheet using your existing employee IDs in the `employee_number` column.
 - Do not leave `employee_number` blank if you want to keep your own numbering.

- Required fields: first name, last name, currency, rate.
- 4. Save as CSV (UTF-8).
- 5. Upload the file and review the preview.
- 6. Confirm import.
 - Rows with duplicate employee numbers will be skipped and listed for correction.

Alternative: If you prefer one file with employees and hours for a specific pay period, use Payroll → Bulk Upload instead (same employee_number rules apply).

Step 3 - Run your first payroll (about 30 minutes)

1. Go to Payroll.
2. Set:
 - Pay period label (e.g. August 2026)
 - Pay date
 - USD/LRD exchange rate for the period
3. Click Start run (loads your active employees) or use Bulk Upload if hours/deductions are in CSV.
4. Review each row:
 - Regular, overtime, and holiday hours
 - Allowances and deductions (ded_* columns in CSV if used)
 - Gross pay, tax, NASSCORP, and net pay
5. Move the run through approval:
 - Draft → Review → Approved → Paid
6. When marked Paid, Slipdesk saves the pay run and payslip data to your account.

Step 4 - Download payslip PDFs (bulk)

1. On the Payroll page, with the run open and calculations complete.
2. Click All Payslips (N) to download a PDF for each employee.
3. PDFs save to your computer one file per employee (browser download folder).

For large teams (100+ employees):

- Keep the payroll tab open until all PDFs finish generating.

- If the list is very long, run payroll in batches (e.g. by department) or download in two sessions.
- Individual PDFs can also be downloaded from each employee row if needed.

Email: You do not need to use Email Payslips for this onboarding. Marking a run Paid may attempt notification emails only where employee email addresses exist; you can ignore that for now or leave employee emails blank until you enable delivery later.

Step 5 - Reports & compliance (optional)

- Reports — Payroll register export (PDF / Excel / CSV)
- Compliance — Tax and NASSCORP summaries for the period

Use these for internal records and statutory filing support.

CSV quick reference

Column	Required	Notes
employee_number	Recommended	Your HR system ID; keep consistent every month
first_name, last_name	Yes	
currency	Yes	USD or LRD
rate	Yes	Hourly rate in that currency
standard_hours	Recommended	Default monthly hours (often 173.33)
nasscorp_number	Recommended	For compliance reports
regular_hours, overtime_hours, holiday_hours	For payroll import	Use on Payroll bulk upload
ded_*	Optional	Itemized deductions (e.g. ded_pay_advance)

Support

For import errors, duplicate employee numbers, or bulk PDF issues, contact your Slipdesk onboarding contact with:

- The CSV file (or a redacted sample)
- Screenshot of any skip/error messages
- Pay period label and employee count

Your immediate next steps (operator checklist)

Since the client is already logged in:

1. Settings - logo, NASSCORP reg, TIN, footer
2. Employees → Import — CSV with `employee_number` filled
3. Payroll - set period + FX → start run → review → Paid
4. All Payslips - bulk PDF download (no email step)

If they have 200+ employees, plan two payroll sessions or department splits for PDF generation so the browser stays responsive.

If you want, I can add a small UI improvement: require or warn when `employee_number` is missing on import, so auto EMP-xxx never surprises anyone.

Phase 1 is complete. In phase 3 Import employees option A UI reassigns EMP can we fix that or would that ruin our set up ? Also kindly give a client facing statement for simple onboarding. I have already created the Client account and they are logged in. Also for now they dont really need to send payslips by email but require bulk pdfs output though.

Employee numbers - fix needed?

No code change is required. Option A import already keeps your CSV IDs.

Situation	Result
<code>employee_number</code> filled (e.g. CHRES-1042)	That value is saved
Column blank	Auto EMP-001, EMP-002, ...
Duplicate ID already in Slipdesk	Row skipped with an error

Payroll uses internal UUIDs, not `employee_number`. Using the client's own IDs is safe and shows correctly on payslips and reports.

If you still saw `EMP-001` everywhere, the CSV likely had an empty `employee_number` column or a mismatched header. Use the template from Employees → Import → Download template - first column must be `employee_number`.

Client-facing onboarding (copy/paste)

Slipdesk - Getting Started

Payroll & payslip setup for [Company Name]

Your account is active. This guide covers importing your team, running payroll, and downloading payslip PDFs in bulk.

What you'll do

- Run compliant Liberian payroll (LRA tax + NASSCORP)
- Generate branded PDF payslips for all employees
- Keep a secure record of each pay period

Note: Email delivery is not part of this setup. You will download PDFs from Slipdesk and distribute them through your own process.

Step 1 - Company profile (~10 min)

1. Open Settings
2. Complete: company name, NASSCORP registration number, TIN (if applicable)
3. Optional: logo, brand colors, payslip footer
4. Save

Step 2 - Import employees (~30 - 60 min)

1. Go to Employees → Import → Download template

2. Fill the spreadsheet using your existing employee IDs in the employee_number column
 - Do not leave this blank if you want to keep your own numbering
 - Required: first name, last name, currency, rate
3. Save as CSV and upload
4. Review the preview and confirm import

Step 3 - First payroll run (~30 min)

1. Go to Payroll
2. Set pay period label (e.g. August 2026), pay date, and USD/LRD exchange rate
3. Start run (loads active employees) or use Bulk Upload if hours/deductions are in CSV
4. Review gross pay, tax, NASSCORP, and net pay for each row
5. Advance: Draft → Review → Approved → Paid (saves the run to your account)

Step 4 - Bulk PDF download

1. On the Payroll page with the run open
2. Click All Payslips (N)
3. PDFs download one file per employee to your computer

Large teams (100+): Keep the tab open until generation finishes. For very large rosters, split by department or run in two sessions.

You do not need to use Email Payslips. Marking a run Paid may attempt notifications only where employee emails exist — you can ignore that for now.

Step 5 - Reports (optional)

- Reports - payroll register (PDF / Excel / CSV)
- Compliance - tax and NASSCORP summaries

Support

Contact your Slipdesk onboarding contact with: CSV sample, any skip/error messages, pay period label, and employee count.

Your checklist (client is already logged in)

1. Settings - company details + branding
2. Employees → Import — CSV with `employee_number` filled
3. Payroll - period + FX → review → Paid
4. All Payslips - bulk PDF download
