

SLIPDESK

Getting Started

Payroll & Payslip Setup for CHRES

Your Slipdesk account is active. This guide walks you through importing your team, running your first payroll, and downloading payslip PDFs in bulk.

NOTE - Email delivery is not part of this setup.

You will download PDFs directly from Slipdesk and distribute them through your own process. You do not need to configure Email Payslips right now.

Before You Start

Have the following ready - this will save time once you begin:

- ☐ **Company** NASSCORP registration number
- ☐ **Company** TIN (if applicable)
- ☐ **Company** logo file (optional - appears on payslips)
- ☐ **Brand** colors and payslip footer text (optional)
- ☐ **A** spreadsheet of your employee roster, including your existing internal employee IDs
- ☐ **The** USD/LRD exchange rate for your current pay period

Estimated total time: ~70 - 100 minutes for first-time setup.

Step 1 - Set Up Your Company Profile

Time: ~10 minutes

1. Open Settings.
2. Complete the following fields: company name, NASSCORP registration number, TIN (if applicable), company logo (optional), brand colors and payslip footer (optional).
3. Click Save.

Step 2 - Import Your Employee Roster

Time: ~30- 60 minutes

1. Go to Employees → Import → Download Template.
2. Fill in the spreadsheet using the field guide below.

Field	Required?	Notes
employee_number	Recommended	Your existing HR/payroll ID. Keep this consistent every month.
first_name, last_name	Required	
currency	Required	USD or LRD
rate	Required	Hourly rate, in the currency selected
standard_hours	Recommended	Default monthly hours (commonly 173.33)
nasscorp_number	Recommended	Needed for compliance reports

WARNING - Don't leave employee_number blank.

If this column is empty, Slipdesk will auto-assign generic IDs (EMP-001, EMP-002, ...) instead of using your own numbering. See the FAQ at the end of this guide if this happens unexpectedly.

3. Save the file as CSV (UTF-8).
4. Upload the file and review the preview screen.
5. Click Confirm Import.

NOTE

Rows with duplicate employee numbers are automatically skipped and listed for you to correct.

Alternative path: If you'd rather combine employee data and hours for a specific pay period into a single file, use Payroll → Bulk Upload instead. The same employee_number rules apply.

Step 3 - Run Your First Payroll

Time: ~30 minutes

1. Go to Payroll.
2. Set the pay period label (e.g. “August 2026”), pay date, and USD/LRD exchange rate for the period.
3. Click Start Run to load your active employees - or use Bulk Upload if hours and deductions are already in a CSV.
4. Review each employee row: regular, overtime, and holiday hours; allowances and deductions (ded_* columns, if used); gross pay, tax, NASSCORP, and net pay.
5. Advance the run through approval: Draft → Review → Approved → Paid.

NOTE

Once a run is marked Paid, Slipdesk permanently saves the pay run and payslip data to your account.

WARNING

Marking a run Paid may attempt to send notification emails only for employees who have an email address on file. If you're not using email delivery yet, you can safely ignore this - or leave employee email fields blank until you're ready to enable it.

Step 4 - Download Payslip PDFs (Bulk)

1. On the Payroll page, open the completed run.
2. Click All Payslips (N) to generate and download a PDF for every employee.
3. PDFs save to your computer - one file per employee - in your browser's download folder.

TIP - Large teams (100+ employees)

Keep the payroll tab open until all PDFs finish generating.

For very large rosters, split the download by department or run it across two sessions.

Individual PDFs can also be downloaded from each employee's row if you only need a few.

Step 5 - Reports & Compliance (Optional)

Use these for internal recordkeeping and statutory filing support:

- Reports → Payroll register export (PDF / Excel / CSV)
- Compliance → Tax and NASSCORP summaries for the period

FAQ / Troubleshooting

I imported my CSV, but all employees show as EMP-001, EMP-002, etc. instead of my own IDs. Did something go wrong?

No code or setup change is needed - the import process already preserves your CSV IDs when they're provided correctly.

Situation	Result
employee_number filled in (e.g. CHRES-1042)	That value is saved and used
Column left blank	Auto-assigned as EMP-001, EMP-002, ...
Duplicate ID already in Slipdesk	Row is skipped, with an error listed

Payroll itself runs on internal system IDs, not on employee_number - so using your own IDs is safe and will display correctly on payslips and reports.

If you're still seeing EMP-001-style IDs everywhere: your CSV likely had an empty employee_number column, or a mismatched column header. Re-download the template from Employees → Import → Download Template and confirm employee_number is the first column.

Getting Support

If you run into import errors, duplicate employee numbers, or issues generating bulk PDFs, contact your Slipdesk onboarding contact with:

- The CSV file (or a redacted sample)
- A screenshot of any skip/error messages
- The pay period label and employee count

Quick Reference Checklist

- ☐ **Settings** - company details + branding
- ☐ **Employees** → Import — CSV uploaded with employee_number filled in
- ☐ **Payroll** - period + exchange rate set → reviewed → marked Paid
- ☐ **All** Payslips - bulk PDF download complete
